

Software Engineering Internship

Spotistic - Berlin

In the heart of Berlin's startup ecosystem, next to SoundCloud and 6Wunderkinder, we are building the next generation **online local marketing** solution. Interested in joining a **Startupbootcamp** accelerated company with first revenues and reaching product/market fit? You will be served with great challenges to grow beyond yourself and be considered a valuable and necessary team member!

More about Spotistic

We are re-inventing local marketing as we provide brands with local data (from Foursquare, Facebook, and other platforms) and insights about their locations. We are happy to solve tough technical problems: aggregating various data sources, semantical analysis, and data-mining.

We've created a fun, casual work environment that lets you work to your maximum potential. We work together, inspiring and mentoring each other to build a great product, having fun along the way and celebrating our successes.

The Technology Stack

Backend

- MongoDB (Aggregations, Map/Reduce)
- Ruby (Sidekiq workers, a bit of Rails)
- Redis (Pub/Sub and more)
- NodeJS (Express, REST API)
- Socket.io

Frontend

- HTML5
- Javascript heavy (AngularJS)
- iOS/Android SDK
- Socket.io

Role & Responsibilities

You will be part of the agile development team and work on the web application for our customers.

We could ask what language you program in or how many years of experience you have, but that's just not how we roll. Are you smart? Do you work your ass off? Can you learn new languages and concepts without hesitation?

Your intelligence, ingenuity, and problem-solving skills are more important than your experience with the particular tech stack that we are using, but you should be happy to learn new technologies and start using them quickly.

You should be fun to hang with for hours — because we'll be spending a hell of a lot of time together.

Your mission will mainly consist in:

- Contributing to the development of the global web-app
- Interacting with the backend API and contribute to its development
- Taking part in development discussions/choices

You will be free to choose your tools (dev environment, etc.)

Skills

Curious and eager to learn HTML5/CSS Javascript Ruby

Bonus points

- Javascript (MV* frameworks)
- NodeJS knowledge
- REST API knowledge
- Git/Github user
- StackOverflow profile
- Open source projects
- Experience with AngularJS
- Experience with NoSQL databases
- Location-based services user (Foursquare, Qype, etc.)
- Agile development experience

If you were/are involved in any project or if you have some realizations you can show, it would be great if you could send us the links.

Application

Send

- Your LinkedIn profile or CV
- Github/StackOverflow profiles if you have any
- References
- Details on your availability
- Salary expectations
