Subject: Startup in Harvard Innovation Lab Seeks Collaboration and Invites Applicants

We are a start-up based in the Harvard Innovation Lab and launched the platform at (www.experfy.com) to help enterprises hire data scientists on-demand.

Experfy is a marketplace for short-term projects involving big data and analytics using statistical methods, machine learning and text mining across a range of disciplines. Hourly rates for projects range from \$50 to \$200 per hour, depending on one's background and domain expertise. Each data expert must go through a highly selective application process to become a provider on the marketplace.

EISTI Graduate Engineering School provides students with professional skills to be leaders in big data management. We would like to ask graduate students and others in EISTI Graduate Engineering School'S Master of Science in Business Analytics program to join us. Individuals with strong quantitative skills are especially encouraged to explore this as a part-time or full-time career option.

Please forward the message to anyone who might be interested in Experfy. Thank you for your time and help. We look forward to hearing from you.

All the best,

Jenny Ya-Chih Cheng
